## EDUCATION

**Iowa State University, Ames, IA** Jan. 2024 – Expected Dec. 2027

*B.S. in Computer Science*

Coursework: Object-Oriented Programming, Data Structures, Discrete Computational Structures, Software Development Practices, Computer Architecture, Advanced Programming Techniques, Algorithms, Operating Systems, Programming Languages, Database Management Systems (in-progress & scheduled; all completed by Summer 2027).

**BI Norwegian Business School, Oslo, Norway** Aug. 2020 – May 2023

*Business Administration coursework*

## PROJECTS

**Real-Time Market Data Filter & Alert System** 2026 – Present

*Python, WebSockets, ntfy*

- Built a Python event-processing system that consumes a live WebSocket stream of Solana token creation events, applying multi-criteria filtering logic to surface tokens matching configurable thresholds.
- Prototyped against simulated historical data before live deployment; integrated ntfy for real-time mobile push notifications on qualifying events.
- Redesigned the data pipeline around free public event streams after evaluating cost and coverage tradeoffs of paid per-token trade data APIs.

**Bible Learning App** 2026 – Present

*React Native, Expo, TypeScript*

- Building a mobile Bible learning app structured around a knowledge graph (people, places, events, themes) instead of a flat lesson list, with breadth-first pathfinding to surface real connections between any two entities.
- Implemented spaced-repetition review with a 5-box Leitner scheduler over questions generated from the graph, plus streaks and progress computed from actual completed lessons rather than separate counters.
- 445-question curated content base compiled into lessons and review items; local lesson flow and graph fully working, with Supabase-backed content as the next milestone.

**Circle, Private Social Media Platform** 2025 – Present

*Next.js, TypeScript, React Native, Expo, Tailwind CSS, Supabase, PostgreSQL*

- Built a full-stack platform for invite-based private communities with authentication, Circle creation, member access control, and post feeds backed by Supabase and PostgreSQL.
- Implemented row-level security policies at the database layer across users, Circles, memberships, posts, and permissions, with Postgres triggers keeping denormalized counters consistent.
- Developed synchronized mobile and web experiences with Expo/React Native and Next.js; resolved cross-platform build and dependency conflicts across environments.

## EXPERIENCE

**Broyte.no, Oslo, Norway** Jun. 2022 – Dec. 2023

*Technical Localization & Customer Support Assistant (Contract)*

- Reviewed and maintained structured JSON configuration files to ensure consistency and correctness across application content.
- Translated technical issues and requirements between developers and users; assisted with issue tracking and documentation to support application updates and localization efforts.

**Dorm Mover, Iowa State University, Ames, IA** May – Aug. 2025 & May – Aug. 2026

- Prepared 100+ dorm rooms per summer under tight deadlines; coordinated with small teams to meet daily assignments efficiently.

## TECHNICAL SKILLS

**Languages:** Java, Python, TypeScript, JavaScript

**Frameworks & Libraries:** Next.js, React, React Native (Expo), Tailwind CSS, JUnit

**Databases & Backend:** Supabase, PostgreSQL

**Tools:** Git, GitHub, VS Code, Claude Code, PyCharm, Eclipse
