EDUCATION

Iowa State University — Ames, IA Jan. 2024 – Expected Dec. 2027
B.S. in Computer Science
Coursework: Data Structures, Software Development Practices, Computer Architecture / ARMv8 Assembly, Advanced Programming Techniques (C/C++), Statistics; Algorithms, Operating Systems, Database Management Systems, Programming Languages (Spring 2027 planned).

BI Norwegian Business School — Oslo, Norway Aug. 2020 – May 2023
Business Administration coursework

PROJECTS

Bookworm — Collaborative Book & Social Platform Aug. 2026 – Present
Java, Spring Boot, Spring Data JPA, MariaDB, Maven, GitLab, REST APIs
- Develop RESTful backend endpoints for book-catalog CRUD operations and integration with frontend requirements in a team-built application.
- Work with Spring Boot controllers, JPA repositories, and relational data models; troubleshoot API contracts, builds, and integration issues.
- Collaborate in Scrum-like sprints using GitLab tasks, feature branches, demos, and shared milestones.

Solana Market Data Collection & Analytics Pipeline 2026 – Present
Python, asyncio, WebSockets, DuckDB, SQL, Parquet, Streamlit, Plotly
- Built a research pipeline that ingests token-launch and market events, persists structured records, and prepares datasets for analysis.
- Implemented DuckDB-backed storage and processing workflows for normalization, deduplication, snapshotting, and Parquet-based analysis datasets.
- Generated time-based features; July 2026 audit records 135K+ tokens and 5.5M+ time-series observations.

Memory & Performance Analyzer Oct. 2026 – Present
C, C++, ARM64 Assembly, performance benchmarking
- Developed C/C++ benchmarks examining pointer-based array traversal, dynamic memory allocation, and execution time across varying workloads.
- Compared sequential and randomized memory access patterns and examined compiler-generated ARM64 assembly to relate C/C++ operations to processor instructions.

BetterFuture — Financial Simulation Engine Jun. – Aug. 2025
Java, Java Swing
- Built a desktop financial planning application projecting loan repayment, income, expenses, and net worth over multi-year periods.
- Organized loans, assets, and repayment strategies into object-oriented classes for configurable financial simulations.

EXPERIENCE

Broyte.no — Technical Localization & Customer Support Assistant (Contract) Jun. 2022 – Dec. 2023
- Reviewed structured JSON configuration files and translated technical issues between users and developers; supported issue tracking and documentation.

Computer Vision & Video Annotation — Independent Technical Project (Remote) Oct. 2026 – Present
Human-in-the-Loop ML, Video Annotation, Quality Assurance
- Annotate time-varying regions of interest in sports footage to support AI-assisted reframing of landscape video for vertical 9:16 output.
- Review tracked ball movement, player actions, and celebrations; check subject visibility and framing consistency across clips.

TECHNICAL SKILLS

Languages: Java, Python, C, C++, JavaScript, TypeScript, SQL, LEGv8/ARM Assembly (coursework)
Backend & Data: Spring Boot, REST APIs, Spring Data JPA, MariaDB, DuckDB, PostgreSQL, Parquet, WebSockets
Tools & Methods: Git, GitHub, GitLab, Maven, Linux/Unix, Scrum-like Agile development, JUnit, VS Code
